150-0009-00

150-0009-00 is made from a neon bulb, usually a NE-2, Tek #150-0002-00.

This bulb is aged for 24 hours at 100 volts D.C. with a 180 K resistor in series with the bulb.

After aging, the bulb is checked to be within a voltage drop of 55 volts \pm 2½ volts.

A drop of red lacquer is put on the bulb near the lead which was connected to the positive voltage while aging. A black dot is put on the shoulder of the bulb. This is the code for a 150-0009-00.
