Vintage Tek Visit

One highlight at Dundee Elementary this week was a visit from Vintage Tek on Monday and Tuesday. Vintage Tek is a museum in Beaverton run by former employees from Tektronix. During their visit they taught students about electronic components, oscilloscopes, LED lights and light measurement and sound waves and measurement. It was a great experience for our students and we are thankful for the volunteers from vintageTEK for bringing this program to us at no cost.

For more information about the visit and to view photos of exhibitions please visit the following link for a story from vintageTEK highlighting this event: <https://vintagetek.org/dundee-stem/>.

If your student enjoyed this learning experience and would like to see more please consider visiting the vintageTEK Museum in Beaverton. Information can be found using the following link: <https://vintagetek.org/home-2/>.
